Contents

1	Main Output	3
2	Running The Code	3

1 Main Output

In `Main.java`, the output will consist of three sections.

1. The first section will print out the schema along with all the relations and their data created in Assignment 1. The relations created are `Students`, `Courses`, `Enrollment`, `Professors`, and `Teaches`, and we have provided our own data for each relation.
2. The second section demonstrates each relational algebra operator by providing one meaningful query. The resulting table of each operator is printed to the console.
3. The third section are the queries from Assignment 1 using our own relational algebra operators implementation. The resulting tables are printed to the console.

2 Running The Code

Since the project utilizes `Makefile`, the command to run the code is `make` or `make run`. If you want to remove the `bin` directory, you can type `make clean`.
